

Expand Beyond™ Corp. Mobile Software Solutions for IT Professionals

Expand  Beyond™

...Now on the Kyocera 7135 smartphone

Mobile software from Expand Beyond extends an organization's existing technology infrastructure by expanding the reach of IT professionals beyond the traditional confines of the office. For the first time, IT workers have true control over their systems back at the office – no matter where they happen to be. With PocketDBA™ and PocketAdmin™ software, IT administrators have a powerful and secure way to manage their networks, databases and servers at anytime, from anyplace with wireless handheld devices such as the Kyocera 7135 smartphone. When IT professionals have the power to monitor, manage and troubleshoot business-critical systems in real-time, they are able to keep systems running at peak performance and achieve increased uptime, efficiency and cost savings across the enterprise.

With PocketDBA & PocketAdmin software, organizations can:

- Reduce costs by decreasing unplanned downtime
- Increase productivity through proactive monitoring
- Speed up emergency troubleshooting
- Provide inexpensive 24x7 insurance against IT staff unavailability
- Reduce staff turnover by improving job satisfaction
- Gain competitive advantage through fuller control over business-critical systems

PocketDBA mobile software from Expand Beyond

PocketDBA mobile software for database administrators is designed with intuitive, menu-driven navigation that quickly and easily allows IT professionals to perform any database-related task or query with a wireless handheld device such as the Kyocera 7135 smartphone. With peak data speeds of up to 153 kilobits per second and a 65,000 color screen, the Kyocera 7135 smartphone is ideal for allowing IT professionals to conduct their work away from the desk – whether they are commuting, traveling, attending an industry conference or simply at lunch.

PocketDBA Key Benefits

Real-Time Access

All work is done live in the database in real time. PocketDBA is the only mobile solution product that goes beyond mere data browsing and actually enables administrators to control the database itself.

Multiple Databases

Connect to hundreds or thousands of databases from a single handheld wireless device by simply configuring the IP addresses and database names on the server.

Security

PocketDBA incorporates industry standard security measures to help protect corporate information from third-party interception. Multiple layers of security are used at every stage of data transmission including SSL, HTTPS protocol, timeouts, logins and passwords. Account and database information never resides in the device, so lost or stolen handhelds are not a security issue. PocketDBA uses a two-tier architecture to keep your database servers off the public Internet. For maximum security, PocketDBA also integrates cleanly with DMZs, VPNs and 2-factor wireless authentication from RSA Security.

Intuitive

PocketDBA is a turnkey software solution that easily installs in minutes, without the need for costly customization. Built with an intuitive user interface, routine tasks and critical procedures are performed in a snap.

PocketAdmin mobile software from Expand Beyond

PocketAdmin mobile software gives network and system administrators full SSH terminal capability and cursor control from wireless handheld devices such as the Kyocera 7135 smartphone. Using a secure shell to any VT-100 compliant Unix, Windows, firewall or router command line, literally any server command is possible.

PocketAdmin Key Benefits

Power

Increase system availability and improve productivity from the convenience of a wireless handheld device. PocketAdmin not only gives you the ability to diagnose system problems but the power to resolve them on the spot! Monitor any number of servers from a single wireless device.

Security

To prevent unauthorized usage and data interception, PocketAdmin integrates multiple layers of encryption including symmetric encryption, public key encryption and data integrity algorithms. Combined, these encryption standards provide the highest levels of protection. Choose from VPNs, RSA SecurID, SSH 2, AES and other security options. Transmit data from other applications via secure tunneling. Change encryption keys at the desktop or in the field using local or remote key exchange.

Session Display Management

Wondering how all that data will fit on your Kyocera 7135 smartphone? With PocketAdmin, you can resize your screen and scroll both vertically and horizontally. True VT-100 emulation is enhanced by color and shortcut keys so you can edit files in vi or kill processes.

Testimonials

"Expand Beyond could do for databases what the remote control did for TVs."

- CIO (Emerging Technology, August 1, 2002)

"Database administrators could dramatically increase their productivity by operating remotely...Imagine the efficiencies in not having to call a DBA back to the office."

- Info World (Test Center, July 2, 2001)

Testimonials (Continued)

"I am very impressed with this product. We had the software installed and running right away and our DBA was able to do work from halfway across the country during a trip to the West Coast."

- Ron Howard, Data Services Manager &
Oklahoma County Assessor

"IT professionals, often the classic 'corridor cruisers' who are mobile within office buildings and corpo-rate campuses are another area deserving of attention. Applications like Expand Beyond's PocketDBA will be crucial to this segment of the enterprise."

- IDC ("Smart Handheld Device Overview"
December 2001)
